

Phishing Awareness Training

- Learn how to recognize and avoid phishing attacks

What is Phishing?

- Phishing is a cyber attack where attackers try to steal sensitive information such as passwords, credit card details, or personal data by pretending to be a trusted source.

Types of Phishing

- • Email Phishing
- • SMS Phishing (Smishing)
- • Fake Websites
- • Spear Phishing (Targeted Attack)

How to Recognize Phishing

- • Suspicious or strange links
- • Spelling and grammar mistakes
- • Urgent or threatening messages
- • Requests for sensitive information

Real-World Example

- Example: A fake email pretending to be from a bank asking you to log in and update your account details.

Prevention Tips

- • Do not click unknown links
- • Always verify the sender
- • Use strong passwords
- • Enable two-factor authentication (2FA)
